Environmentally Sound Equipment Solutions for the Collision Repair Specialist

BECCA®

It's all about improving your productivity, finishing quality, saving money while being good to our environment.

In today's environment, collision shops know the meaning of efficiency, reduced cycle time and variable cost reduction. BECCA has created the finest system for handling your paint shop's clean-up needs by designing a full line of top flight products to meet every challenge. All backed by **BECCA CARE™**, a national distributor network of factory trained and certified local experts for your sales, installation, training, service and environmental piece of mind. No other company can offer you this level of professional service and advice.

Which BECCA Combo Package is right for me?

What are your capacity needs?

BECCA has developed a wide product offering to match your shop's current and future needs. Our research determined traditional cleaning methods require up to 3/4 gallon of fresh clean-up solvent to properly clean spray guns, cups and mixing tools used per paint job (priming, base and clear coat) and remember a paint job can be a small part such as a bumper cover or mirror housing all the way up to an all-over vehicle refinish. Therefore, we offer (2) different Solvent Saver™ recycling capacities, **High Capacity** and **Standard Capacity**, both certified to UL 2208. Which category Becca Combo system fits your need? Well that easy, just follow the recommendations below...

HIGH CAPACITY

Medium to Large shops with 7 or more refinish jobs per day. Additionally, two (2) separate Becca spray gun cleaning units can be attached to a single High Capacity Solvent Saver™ Recycler for added efficiency and cost savings. Maximum solvent recycling rate is 75 gallons (255 litres) / 5 day week, running 3 cycles per day.*

Electrical Service Spec:
220 V / 50-60 Hz / Single Phase, 9.5 Amps

STANDARD CAPACITY

Small to Medium shops with 6 or fewer refinish jobs per day. Maximum solvent recycling rate is 45 gallons (194 litres) / 5 day week, running 3 cycles per day.*

Electrical Service Spec:
220 V / 50-60 Hz / Single Phase, 4.5 Amps

Available with boiler options of three or six gallons (13 or 27 litres), the BECCA Solvent Saver™ Recycler system refines polluted solvents automatically, freeing you up for other tasks.

Optional 2nd Spray Gun Cleaning Unit (pictured Next 80)

BECCA Combo Model Next 30 w/SC... "Our most popular standard capacity package!"

Our revolutionary system design makes cleaning easier than ever!
PATENT PENDING

NOW choose your exceptional BECCA Spray Gun Cleaning Unit...

Hands-Free (Model Next 30) featuring manual brush cleaning

The upper end product of basic professional spray gun cleaning technology. Hands free allows for other tasks to be tended to while the unit is working. Performance features include...

- (2) Spray gun simultaneous cleaning capacity
- USED solvent pre-clean feature
- "Clean-solvent" only final rinse cycle
- (1) Diaphragm pneumatic pump
- Fume extractor duct opening (4") to exhaust harmful fumes and odors
- Compact size makes it ideal for space limited areas
- Manual flow brush
- Revolutionary Automatic Power Clean™

The BECCA Advantage

Dirty Solvent Transfer to BECCA Solvent Saver™, featured on all BECCA Combo Systems makes cleaning truly "hands-free."

Manual Workstation

(Model Next 70)

If clean is what you want this unit will do the job. Manual cleaning is by far the best way to clean paint equipment and mixing tools. Disassemble the air cap, needle, cup, etc. and the hand held solvent flowing brush wipes away paint residue from all accessible surfaces. Internal spray gun cleaning is even easier with the revolutionary BECCA Manual Spray Out™. Performance features include...

- Hand held solvent flowing cleaning brush
- (2) Diaphragm pneumatic pumps
- External compressed air pressure regulator
- Fume extractor duct opening (6") to exhaust larger quantities of harmful fumes and odors

...plus much more!

Deluxe Workstation

(Model Next 80)

BECCA's finest full-featured spray gun cleaning workstation is the Next 80. Put simply, this Workstation combines the easy to use "hands free" system with the superior cleaning capabilities of the Manual Spray Out™ Workstation. The rugged construction and large size demonstrate this Workstation is serious about eliminating contamination. Performance features include...

- Hands free automatic cleaning basin, (2) spray gun capacity and "Clean-solvent" only final rinse cycle
- Hand held solvent flowing cleaning brush
- (2) Diaphragm pneumatic pumps
- External compressed air pressure regulator
- Fume extractor duct opening (6") to exhaust larger quantities of harmful fumes and odors
- Revolutionary Automatic Power Clean™

...plus much more!

BECCA CARE™

Our signature of commitment to the collision repair industry

BECCA is the industry's only company that maintains a network of local factory certified and trained professionals. Count on your local **BECCA CARE™** distributor for equipment selection assistance, pricing options, installation, local code knowledge, parts/consumables, training, and on-site service to mention just a few. When you purchase BECCA rest assured you will be taken care of now and for many years to come.

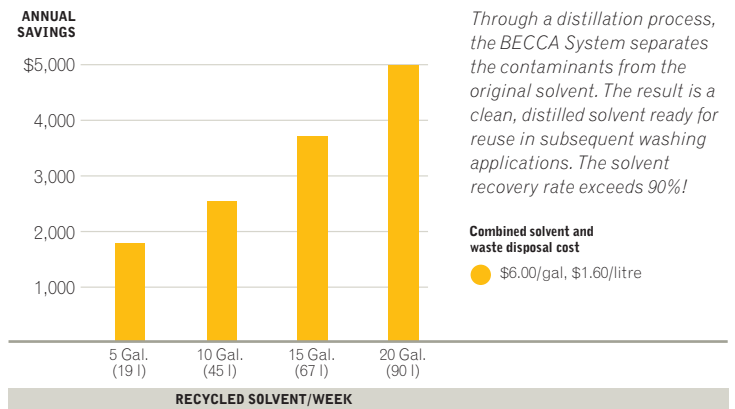

PAYBACK!

Generate substantial savings and less environmentally hazardous waste

In-house recycling of waste solvents is a money saving (i.e. money making) venture. You will eliminate 90% of your solvent purchases and substantially reduce your hazardous waste generation. Combine the savings of purchasing only 10% of your historical solvent amounts with the huge savings associated with minimizing hazardous waste disposal costs as well as the cradle to grave risks and you have a winning combination.

Savings generated from solvent recovery (90% rate)

See for yourself in less than 5 minutes...

BECCA will produce a custom computerized payback analysis utilizing your actual shop data. Just supply us your solvent purchase cost, hazardous waste disposal cost and gallons of solvent purchases, then you are only 5 minutes away from seeing substantial savings with increased efficiency.
